Shell scheme cladding with Magiclad rollable correx panels

- CLIENT** Stark Software International Ltd
- EVENT** EMEX: The Energy Management Exhibition
- STAND** Standard 5m x 4m shell scheme with fascia removed
- USPs**
 - Graphics printed on 5mm rollable correx
 - Wall graphics rolled up and transported in a car
 - LED sign attached to graphics with velcro (no brackets)
 - Graphics, LED sign and cabinets all reusable

WORLD EXHIBITION STAND AWARDS
All stands up to 24 sqm
Best shell scheme in competition

PRINTED ROLLABLE CORREX

The graphics for this stand are attached to the shell scheme using Shell-Clad clips, ie the shell scheme itself is the frame.

In this example, ie a 5m x 4m corner stand, the clips will have taken perhaps ten minutes to fit (one person).

The nine printed rollable correx panels, required to clad this shell scheme, pack into 3 x 1080mm x 300mm tubes (with carry handles) so can be transported on the back seat of a family saloon car.

These panels will have taken one person approximately one hour to hang (depending on experience). As you can see, a seamless design is easily achievable.

The back-lit LED sign was velcro'd to the graphics - no brackets or fixings were required, just 50mm velcro hook and loop. You cannot do this with a banner drop style material.

These graphics have since been used at further shows.

Advantages of Magiclad (rollable correx)

- Extremely durable. Our showroom panels have survived well over 200 demos
- Easy to add and remove panels to accommodate different sized stands (*design allowing*)
- Internal corners, external corners, diagonal corners and stores all accommodated
- Lightweight signs, graphics and even products can be applied to the front surfaces
- Far easier to hang than rigid (foamex / foamboard) panels
- No tools required for installation, just a short ladder
- After use panels pack away in tubes and can be stored in a corner cupboard
- No van for transporting graphics, no dedicated storage area, only one person to carry, only one person to install

Magiclad panels can be hung on a PromoWalls (see separate card) if customers want a free standing display option.
